Miami, FL | U.S. Citizen

Work History

Senior Software Engineer at Code Particle, Miami, FL 02/2018 to 08/2026

- Led frontend delivery for Code Particle's enterprise clients using React, Next.js, TypeScript, and CSS, partnering with product, design, and backend teams so customers could reliably purchase products, manage subscriptions, and maintain their accounts.
- Rebuilt AG1's platform around GraphQL, Shopify Subscriptions APIs, frontend architecture, and custom subscription flows, migrating ~1M users with zero customer-facing downtime.
- Designed Sanity CMS schemas, content models, and reusable configuration so product and design teams could ship experience updates without engineering, increasing release cadence from ~2 releases per week to daily.
- Integrated Cursor, Codex, Claude Code, MCP integrations, and agentic development workflows across implementation, debugging, and refactoring to roughly double implementation throughput while maintaining engineering quality.
- Translated Figma designs into Storybook-driven component libraries and accessible design-system patterns using HTML, Sass, WCAG, and frontend performance practices to reduce duplicate implementation work, speed feature development, and improve UI consistency and usability.
- Built international commerce experiences with JavaScript, responsive design, checkout, shipping, pickup, and market-specific fulfillment flows so customers across six markets could purchase products and manage subscriptions using the correct regional commerce experience.
- Implemented automated testing and regression coverage with React Testing Library, Playwright, GitLab CI/CD, and code reviews to catch defects earlier and support safer, more reliable releases.
- Implemented experimentation and analytics instrumentation with Statsig, LaunchDarkly, RudderStack, feature flags, and A/B testing to de-risk rollouts, compare variants, and give product teams behavioral data for product decisions.

Lead Software Engineer at SonicLoop Networks, Miami, FL 09/2015 to 02/2018

- Built public websites and internal business tools for corporate clients using JavaScript, AngularJS, HTML, CSS/Sass, and responsive design, partnering with designers and stakeholders to turn business requirements into usable production applications.
- Led a team of 4 junior developers through Agile/Scrum, sprint planning, mentoring, and delivery coordination to remove blockers and keep client projects on schedule.
- Developed Node.js services, NoSQL-backed data flows, APIs, and internal utilities to support client-facing products and operational workflows.

Education & Certificates

- B.B.A. in Management Information Systems from Florida International University Status - Graduated
- Full-Stack Web Development Certificate from Ironhack
