Miami, FL | U.S. Citizen

Work History

Senior Software Engineer at Code Particle, Miami, FL | 02/2018 to 08/2026

- Led development of customer-facing web applications for enterprise clients using React, Next.js, and TypeScript, owning technical decisions, code reviews, and release coordination with product, design, and backend teams.
- Owned AG1's purchase flow from product selection through checkout, integrating GraphQL and Shopify Subscriptions APIs as part of a platform migration serving over 1 million users with zero customer-facing downtime.
- Optimized frontend performance across client websites through image optimization, lazy loading, code splitting, and caching, including raising the Lighthouse performance score of Code Particle's own website from 50 to 97.
- Designed Sanity CMS schemas and reusable content models that increased content release cadence from twice weekly to daily, allowing product and design teams to update variants, bundles, and discounts without code changes.
- Built responsive, accessible UI components across client projects using WCAG best practices, Material UI, and Tailwind CSS, including 25+ Storybook-documented components reused throughout AG1's website to improve consistency and reduce duplicated work.
- Wrote regression tests with React Testing Library and Playwright and configured GitHub and GitLab CI/CD pipelines to run them before merges and deployments, catching defects before release across client projects.
- Built Modly's connector and RAG Context Profile interfaces for configuring third-party data ingestion and grouping company resources, plus a Chrome extension connected to users' self-hosted LLMs, to enable webpage summarization and chat responses informed by user-selected company knowledge.
- Created reusable prompts and skills and configured MCP connections in Cursor, Codex, and Claude Code to streamline implementation, debugging, and refactoring, increasing development velocity by approximately 50% while maintaining quality.

Lead Software Engineer at SonicLoop Networks, Miami, FL | 09/2015 to 02/2018

- Built full-stack solutions spanning frontend websites, APIs, content management systems, and databases using Angular, JavaScript, HTML/CSS, Node.js, and MongoDB to turn client requirements into production applications.
- Mentored four junior developers through task assignment, code reviews, pair programming, and technical guidance, helping them deliver features more independently while coordinating work through Agile/Scrum sprint planning.

Technical Skills

Frontend: JavaScript, TypeScript, React, Next.js, Angular, HTML, CSS/Sass, Tailwind CSS, Material UI

State & Data: Redux, TanStack Query (React Query), GraphQL, REST APIs

UI & Quality: Storybook, Design Systems, WCAG Accessibility, Playwright, React Testing Library

Backend & Delivery: Node.js, PostgreSQL, SQL, MongoDB, Git, GitHub/GitLab CI/CD

Education & Certificates

- B.B.A. in Management Information Systems, Florida International University - Graduated
- Full-Stack Web Development Certificate, Ironhack
